IHF01
Industrial heat flux sensor

IHF01 industrial heat flux sensor measures heat flux and temperature, typically in industrial high-temperature environments. IHF01 is waterproof, withstands high pressures and is extremely robust. With signal wires electrically insulated from the sensor body, it complies with industrial safety standards, such as CE and ATEX for explosive areas. IHF01 is particularly suitable for trend-monitoring and comparative testing. The same technology can be used to manufacture heat flux sensors for different applications.

Introduction

IHF01 measures heat flux and surface temperature of industrial equipment like furnaces, boilers, fluidised beds, distillation columns and ovens. The sensors inside IHF01, a thermopile and a thermocouple, are protected by a fully sealed stainless steel body. It is suitable for long-term use at one location as well as repeated installation when a measuring system is used at multiple locations. IHF01 measures heat flux through the object on which it is mounted, in W/m², as well as the temperature in °C. The sensors in IHF01 are a thermopile and a type K thermocouple. The thermopile measures the local heat flux.

The thermocouple measures the absolute temperature of the surface on which HF01 is mounted, as well as the approximate sensor body temperature. A thermopile and a thermocouple are passive sensors; they do not require power.

The part of the cabling closest to the sensor is a special high-temperature metal sheathed cable with an interlocked spiral stainless steel armour. The sensor as well as the high-temperature cable and armour withstand temperatures up to 900 °C. The temperature range is reduced to 750 °C in case the optional black coating is used. The low-temperature extension cable has a jacket of PTFE type plastic.

Suggested use
trend-monitoring and comparative measurement of heat flux and surface temperature in industrial installations

IHF01 advantages
- robust
- suitable for use at high temperatures
- IP protection class: IP67
- signal wires electrically insulated from the sensor body
Operation
Using IHF01 is easy. It can be connected directly to commonly used data logging systems. The heat flux, in W/m², is calculated by dividing the IHF01 output, a small voltage, by the sensitivity. The sensitivity is provided with IHF01 on its product certificate. Equipped with heavy duty cabling, and having a fully stainless steel casing so that moisture does not penetrate the sensor, IHF01 has proven to be very reliable. It survives long-term outdoor installation.

Standards
IHF01 complies with the requirements of ASTM C1041-10 Standard Practice for In-Situ Measurements of Heat Flux in Industrial Thermal Insulation Using Heat Flux Transducers.

Options
- longer cable (specify total cable length for both cable types in m)
- EC type examination certificate (ATEX)
- 2 G Ex d IIC T6
- black coating
- connector at IHF01 cable end
- low-temperature extension cable with 2 connectors, matching cable connector and chassis connector
- chassis connector with internal wiring (colour code of wiring identical to cable colour code)

L2 = standard length 3 m
Trend monitoring and comparative measurement

IHF01 is most suitable for relative measurements, i.e. monitoring of trends relative to a certain reference point in time or comparing heat flux at one location to the heat flux at another location. If the user wants to perform accurate absolute measurements with IHF01, as opposed to relative measurements, the user must make his own uncertainty evaluation and correction for systematic errors.

Calibration

IHF01 calibration is traceable to international standards. The factory calibration method follows the recommended practice of ASTM C1130-07 (2012).

About Hukseflux

Hukseflux Thermal Sensors offers measurement solutions for the most challenging applications. We design and supply sensors as well as test & measuring systems, and offer related services such as engineering and consultancy. With our laboratory facilities, we provide testing services including material characterisation and calibration. Our main area of expertise is measurement of heat transfer and thermal quantities such as solar radiation, heat flux and thermal conductivity. Hukseflux is ISO 9001:2015 certified. Hukseflux sensors, systems and services are offered worldwide via our office in Delft, the Netherlands and local distributors.

IHF01 outperforms competing models: how?

The IHF industrial heat flux sensor product range is the best available for use in unfriendly environments and at high temperatures. This is why.

- **High temperature**: The IHF range sensors may be used up to 900 °C.
- **High accuracy**: passive guard included
  A passive guard, i.e. a non-sensitive part around the sensor, is essential to avoid errors due to edge effects. IHF01 includes guard according to ISO 9869. Competing models often have sensitive parts running to the edge of the sensor, resulting in large potential measurement errors.
- **Durable: sturdy “installer-proof” connection**
  IHF01’s cable to sensor connection is a specially designed high-temperature metal sheathed cable, with a strain relief by a hose. Installer-proof! Competing sensors often have weak and vulnerable wire connections. The connection from high temperature cable to low temperature extension cable is very sturdy and also has a strain relief with a spring.
- **Stable: waterproof (IP67), corrosion-proof, pressure resistant**
  IHF01s sensor to cabling connection is full metal, and waterproof, pressure resistant to 10 bar. The protection class is IP 67. Competing sensors often have wire connections with open contact to the environment. This is a large potential source of damage, as well as a starting point for corrosion and sensor instability.
- **Reliable and safe: electrically insulated signal wires**
  IHF01’s signal wires are electrically insulated. This guarantees electrical immunity. Competing sensors often have wire connections with open contact to the environment. This is a large potential source of measurement error (zero offsets caused by ground loops) as well as potential safety issue.
- **Practical mounting flanges**
  Durable cable with strain relief, pressure and waterproof
- **Passive guard area, with flanges reducing deflection errors, also used for mounting**
- **Durable cable with strain relief, pressure and waterproof**
- **High temperature, withstands up to 900 °C**
- **Housing completely sealed**
- **Thermocouple included**
- **Optional: Industry safety approvals**
  EC type examination certificate (ATEX) II 2 G Ex d IIC T6 for use in explosive environments.
- **Best paperwork**
  Hukseflux has the paperwork covered; IHF01 is provided with formally traceable calibration certificates. We calibrate in accordance with ASTM C1130.
