SR20-D2
Digital secondary standard pyranometer with Modbus RTU and 4-20 mA output

SR20-D2 is a solar radiation sensor of the highest category in the ISO 9060 classification system: secondary standard. SR20-D2 is designed for the solar PV industry, offering two types of commonly used irradiance outputs: digital via Modbus RTU over RS-485 and analogue 4-20 mA (current loop). Individually tested for temperature and directional response, SR20-D2 is the most accurate digital secondary standard pyranometer available.

Introduction
SR20-D2 measures the solar radiation received by a plane surface, in W/m², from a 180° field of view angle. It is employed where the highest measurement accuracy is required. SR20-D2 offers two types of outputs commonly used in the solar PV industry: digital via Modbus RTU over RS-485 and analogue 4-20 mA (current loop). These industry standards allow for easy data acquisition, easy read-out and error-free instrument exchange when using SR20-D2.

The best pyranometer for the PV industry
SR20-D2 is the most accurate digital secondary standard pyranometer available. Its benefits:
- Digital output: easy implementation & servicing
- Best-in-class temperature response
  $\pm 0.4{\%}$ (-30 to +50 °C), best “zero offset a” and best calibration uncertainty
- Test certificates for temperature- and directional response included as required by ISO 9060
- Re-calibration registers fully accessible to users

Best measurement accuracy
In order to improve overall measurement accuracy, Hukseflux effectively targeted two major sources of measurement uncertainty: calibration and “zero offset a”. In addition, SR20-D2 has a negligible temperature response. All are best in class. The temperature response of every individual instrument is tested and corrected onboard by the instrument electronics, using a second degree polynomial.

Demanding applications
SR20-D2’s low temperature dependence makes it the ideal candidate for use under very cold and very hot conditions.

SR20-D2 design
SR20-D2 pyranometer employs a state-of-the-art thermopile sensor with black coated surface, two domes and an anodised aluminium body. The connector, desiccant holder and sun screen fixation are very robust and designed for long term industrial use. SR20-D2 uses a high-end 24-bit A/D converter. All parts are specified for use across SR20-D2’s entire rated operating temperature range. SR20-D2 offers two types of outputs commonly used in the solar PV industry: digital output via Modbus RTU over 2-wire RS-485 and analogue 4-20 mA output (current loop).

Standards
Applicable instrument classification standards are ISO 9060 and WMO-No. 8.

Re-calibration: accessible registers
The recommended calibration interval of pyranometers is 2 years. The registers containing the applied sensitivity and the calibration history of SR20-D2 are fully accessible for users. This allows the user to choose his own local calibration service. The same feature may be used for remotely controlled re-calibration of pyranometers in the field. Ask Hukseflux for information on this feature and on ISO and ASTM standardised procedures for field calibration.

Choosing the right instrument
Pyranometers are subject to classification in three classes according to ISO 9060. From second class to first class and from first class to secondary standard, the achievable accuracy improves by a factor 2. Measurement accuracy does not only depend on instrument properties, but also on measurement conditions. A very accurate instrument will quickly underperform without a regular schedule of maintenance. Our pyranometer selection guide assists you in choosing the right instrument. Whatever your application is: Hukseflux offers the highest accuracy in every class at the most attractive price level.

Hukseflux Sensor Manager software
For communication between a PC and SR20-D2, the Hukseflux Sensor Manager software is included. It allows the user to plot and export data, and change the SR20-D2 Modbus address and its communication settings.

SR20-D2 specifications
- Measurand: hemispherical solar radiation
- ISO classification: secondary standard pyranometer
- Calibration uncertainty: < 1.2 % (k = 2)
- Zero offset: 5 W/m² unventilated, 2.5 W/m² ventilated
- Calibration traceability: to WRR
- Calibration registers: accessible to users
- Spectral range: 285 to 3000 x 10⁻⁹ m
- Rated operating temperature range: -40 to +80 °C
- Temperature response: < ± 0.4 % (-30 to +50 °C)
- Heater: no heating
- Temperature response test report included
- Directional response test report included
- Standard cable length: 5 m
- Backwards compatibility: SR20-D1

Digital output
- Output: - irradiance in W/m²
  - instrument body temperature in °C
- Communication protocol: Modbus / over 2-wire RS-485
- Transmission mode: RTU
- Rated operating voltage range: 5 to 30 VDC
- Power consumption: < 75 x 10⁻³ W at 12 VDC

4-20 mA output
- Output: irradiance in W/m²
- Transmitted range of 4-20 mA output: 0 to 1600 W/m²
- Rated operating voltage range of 4-20 mA output: 5.5 to 40 VDC
- Power consumption:
  - main supply: < 75 x 10⁻³ W at 12 VDC
  - 4-20 mA current loop: < 40 x 10⁻³ W at 12 VDC, with recommended 100 Ω shunt resistor

Options
- longer cable, in multiples of 5 metres
- adapted transmitted range for 4-20 mA output
- ventilated with VU01 ventilation unit

About Hukseflux
Hukseflux sensors, systems and services are offered worldwide via our office in Delft, the Netherlands and local distributors.
